Print an image suitable for toner-transfer resist

Open the .brd file in Eagle

Under the “view” menu choose “Display/Hide Layers...”

Click the layer numbers on the left. Find the layers you want to print. Click "OK".

Click in the command line (above the image area" and enter the command RATSNEST to show the ground plane.

Under the file menu, choose "Export", then choose "Picture".

Select an appropriate DPI (300+), click "monochrome", click "browse" to name your image file.

Eagle will generate a .png file suitable for printing from an image editor.
