

MIDIBox Pokey 2

Many years ago, back in 2007, nILS began his work on the MB-POKEY which is documented here on the [Wiki](#) and on the [Forum](#)

New projects came along that he maybe found more interesting, so now we have picked up from where he left to at least continue the work a bit further.

The ultimate goal would be a 4xPokey with full CS on LPC17, but for now it's a single Pokey on a PIC based MIOS8 Core.

The sound is the same though, that great Atari sound.

Here we will present the schematic etc. to be added soon.....
