## Novation Launchpad Button LED Matrix (BLM)

## Link to Forum Discussion

Since firmware version 87, the SEQ V4 supports the use of two Novation Launchpads as a BLM control surface. Two Launchpads form a  $16\times8+X$  BLM, and up to four can be connected to make a full  $16\times16+X$  control surface.

The Launchpad BLM is implemented as a feature of the JUCE-based BLM emulator software. The launchpads don't connect to the SEQ directly. Instead, they connect to a computer running the JUCE BLM emulator - the emulator software acts as a translator, converting the BLM Protocol sysex messages into midi signals to light the LEDs on the Launchpad, and translating button presses on the Launchpad into a format the SEQ can understand.

Support for button grid controllers other than the launchpad may be possible in the future.

## **MIDIdocs**

## **SETUP**

Download the latest firmware and upload it to your SEQ using MIOS Studio

Go to the **MIDI** > **Misc.** menu page on your SEQ V4. Set "BLM Scalar Port" to one of the USB Ports - I use USB4.
