

PIC Programming

====PIC Your Personal Introductory Course====by John Morton

ISBN 0 7506 5038 9

Purchased from [Amazon|<http://www.amazon.com>] @ £14.99This is an introductory book for the beginner. It commences with fairly simple problems using the less complicated versions of the [Microchip|<http://www.microchip.com>] PICs. It progresses through to version of PIC having [EEProms](#) and A/D converters. I think that this is a good book to learn [assembler](#) programming for use with PICs. However I confess to not having read any other introductory book on the subject!Unfortunately the book does not cover some of the instruction set of the [PIC18F452](#). This could of course be supplemented by downloads from Microchip.====Embedded Design with the PIC18F452

Microcontroller====by John B. Peatman

ISBN 0 13 046213-6

Purchased from [Amazon|<http://www.amazon.com>] @ £35.99As you can see above this is not a cheap book. However, as I progress with trying to understand [MIOS](#) I am finding that I refer to it more and more. As you can see from its title, it is written specifically for the [PIC18F452] that is the current [microprocessor](#) used in MIOS.The main advantage of this book is that it covers in detail the following topics relating to the [PIC18F452](#) under the chapter headings:

- CPU Architecture
- Instruction Set
- LCD Displays
- Interrupts and Interrupt Timing
- Analog to Digital Conversion
- I/O Pin Considerations
- Serial Interfacing

This is not a beginners book! A beginner will need a gentler introduction such as the first book.
