

# CV-1

CV-Recorder/Looper & CV-Generator

Control Voltage Recorder, Looper, and Generator - for a own Eurorack-Line... more in Future!

-this picture is the first prototype - pre-Eurorack 🤪 [very-early-version...k](#)

## Features

- \* A Envelope which can be Recored from an AIN-Source, it can be Editet on Startpoint,ATK-Playbackrate, Decay-Playbackrate
- \* LFO which Waveform is stepless morphable from Sine Square Tri Saw-Up to Saw-Down...(only Clocksynced!)
- \* MSQ MotionSequencer to loop a CV-Signal.
- \* A Mixer Page which Mixes/Mutes ENV+LFO+MSQ - and scales the output CV
- \* Copy, Paste, Clear: to Transfair the CV Sequence to other CV1 Instances
- \* ProgramChange Load and Store on microSD-Card, Load and Store are CC-Commands, so you can remote the device
- \* The Sequencer can be set to Tact Systems: 3/4 4/4 5/4 7/4 9/4 11/4 13/4

## Hardware Requirements

### Midibox:

- [dipcoref4](#) - this is the  $\mu$ C Brain for CV1
- no other PCBs needet - but expandable with other Eurorackmodules in Future

- µSD-Card, formatted with FAT32
- Soldering Iron - with a Dip that can Handle SMD-Parts, Wires, solder Paste for the µC....
- Eurorack Power Source +-12V AND +5V!

## Set

### Cabeling

Midi IN1 >> CV1 Remote Device or a Midi-Sequencer

Midi OUT >> to a Global CV1 Remote Device  - which will need a lot of Midiinputs [M16?](#)

- @JMidi1: connect your Sequencer to get Midiclock and Programchanges
- @JAIN1: 2 CV Inputs - 12V tollerant
- @JAUT3: 1 CV Output - (internal DAC with Protection Cirtuit > 12V Tollerant)
- @J19: Get up to 8 CV-Outputs, with a [AoutNG](#)
- @JLCD1: up to 4 Additional OLED-Displays for every one a Reset Line - so no additonal Circuit needet
- @J89: DIN and DOUT Shiftregister Chain: thought for decidet Expander Modules (which will come in near future
- @J2/Bootload: If the core is not starting up - because of bad-Firmware, then bridge this Jumper to come into the Bootload-Mode

## Software

### Firmware

yes it loopin... but not good enough to release anything...

## Building

The Design is optimized for Pick and Place most SMD Parts are on the Top-PCB  
i ordered 5 PCBs from JLCPCP with almost all SMD Parts (except 10pF µSD and 4x100nF) presoldered

now waiting for Presoldered PCBs  - for 15€ a Piece!

## Frontpanel

## Case

## BOM

the 22R Resistors should be 220, the Green LEDs are still to bright even with 440 Ohm Resistors...

## Schematic

## To Do

a housing/case or frontplate

## Resources

# Community users working on it

- **Phatline** = Prototype, Schematic, PCB, Programming, Documentation, all...

Just let a Private message on the forum to user already involved.

I have ProtoBoards here - i test one, and if it works, i can share them for Beta Testing-if you pay the postage
