DIN & DOUT pin-numbers

The following table shows the relation between pin- and serial-register-numbers on the software side, and physical pins and their labeling on the hardware side. Shiftregisters are always counted from 1 (also on the software-side), and pins are always counted from 0.
Please note that the order of DOUT pins is reversed compared to DIN pins. For a deeper explanation of this issue, refer the information after the table.

Pin table

Shift Register	SR number	Pin Number (sw)	Pin Hex number (sw)	Pin Name (DIN PCB / SR IC)	Pin Name (DOUT PCB / SR IC)
first	1	0	0x00	D0 / QA	D7 / H
first	1	1	0x00	D1 / QB	D6 / G
first	1	2	0x00	D2 / QC	D5 / F
first	1	3	0x00	D3 / QD	D4 / E
first	1	4	0x00	D4 / QE	D3 / D
first	1	5	0x00	D5 / QF	D2 / C
first	1	6	0x00	D6 / QG	D1 / B
first	1	7	0x00	D7 / QH	D0 / A
second	2	8	0x0 8	D0 / QA	D7 / H
second	2	9	0x0 9	D1 / QB	D6 / G
second	2	10	0x0a	D2 / QC	D5 / F
second	2	11	0x0b	D3 / QD	D4 / E
second	2	12	0x0c	D4 / QE	D3 / D
second	2	13	0x0d	D5 / QF	D2 / C
second	2	14	0x0e	D6 / QG	D1 / B
second	2	15	0x0f	D7 / QH	D0 / A
third	3	16	0x10	D0 / QA	D7 / H
third	3	17	0x11	D1 / QB	D6 / G

Numbers, labels and order of pins

```
For DOUT shift registers, software pin-numbers will be reflected in reverse
direction on hardware level:
pin-number 0 (software level) is D7 of the first shift register (hardware
level), not D0!
pin-number 15 (software level) is D0 of the second shift register(hardware
level), not D7!
```

```
The first shift register is for both DIN and DOUT the one that is closest to
the core on hardware level.
```

```
In the datasheets of the shift-register IC's, D0 is often labled A / QA, D7
is labled H / QH.
In TK's layouts the labels for IC-pins are I0 - I7, O0 - 07, which
corresponds to A/QA - H/QH.
```

```
DIN chain hardware-level: CORE <- R1::qH <- R1::H <- R1 <- R1::G .....
R2::qH <- R2::H etc.

The first bit read is DIN1::I7, this goes to the MSB on software level. MSB
represents the higher pin value,
so you have the same order in hard-  as in software.
```

```
DOUT chain hardware-level: CORE -> R1::SER -> R1::A -> R1::B -> R1::C .....
R2::SER -> R2::A etc.

first bit pushed out is LSB of the last SR(software level), this goes to
Rlast::H. Last bit pushed out is MSB of first SR (software level),
this goes to R1:A. On software level, MSB represents the higher pin value,
so A will represent alway the higher pin value on hw-level for DOUT chains.
```

```
MIOS_DOUT_SRSet / MIOS_DOUT_SRGet / MIOS_DIN_SRSet / MIOS_DIN_SRGet: LSB
always reflects the lowest pin number, MSB the highest pin number.
```

Pin mappings in software (assembler)

Sometimes the pin numbers of special DINs or DOUTs can be specified in the main.asm or setup_*.asm file of a MIOS application.

Examples

```
#define DEFAULT_MIDI_RX_LED 0x40        ; DOUT SR#9, pin D0
#define DEFAULT_MIDI_TX_LED 0x41        ; DOUT SR#9, pin D1</file>
```

```
#define DEFAULT_DIN_MENU_EXEC         7       ; menu exec button assigned to
DIN pin #7
#define DEFAULT_DIN_MENU_SNAPSHOT     6       ; menu snapshot button
assigned to DIN pin #4
#define DEFAULT_DIN_MENU_RIGHT        5       ; NOT USED - overlayed by
datawheel
#define DEFAULT_DIN_MENU_LEFT         4       ; NOT USED - overlayed by
datawheel</file>
```

```
     ;;          SR  Pin  Mode
      ENC_ENTRY  5,  0,  MIOS_ENC_MODE_NON_DETENTED   ; V-Pot 1
      ENC_ENTRY  5,  2,  MIOS_ENC_MODE_NON_DETENTED   ; V-Pot 2
      ENC_ENTRY  5,  4,  MIOS_ENC_MODE_NON_DETENTED   ; V-Pot 3
      ENC_ENTRY  5,  6,  MIOS_ENC_MODE_NON_DETENTED   ; V-Pot 4</file>
```
