

# mbuntu

Status Update 15/01: Thanks to a kind donation from stryd's neighbour, we now have a box dedicated to mbuntu development. Now working out the finer points of the interaction between apps and also some config tricks. mbuntu's beginnings are stryd\_one's full-time operating system on three machines, so it could be said that it's coming along OK, or you wouldn't be reading this ;)

Status Update 07/09: Script is coming along slowly. Still screening apps and learning the ins and outs of packaging.

**If you would like to install a few things to figure out what's the "best" tool for a certain job, shout out!**

**If you know about .deb packaging, we'd love any advice you can offer :)**

Upcoming stuff:

Harvesting packages in 64studio/CCRMA/Ubuntu Studio and screening them for inclusion. (See below for links)

Plugin section

Harvesting links of how-to's for stuff that must be done manually (damn)

Turn this page into a table with:

App name | Description | Home page | Latest Version | Repo Location (Existing OR Destination) | Existing Repo Version OR Packaging Priority | Add footnotes for links like howto's etc No longer req'd, additional repos all in the script already with comments.

There's a lot of stuff listed here - don't worry, we're anti-bloat. Only the apps that are worthy will make the cut.

**means we're pretty sure about this one** Add one of these if you see something you really want!

**means please share any info you have and can find**

We can tidy the page up as this gets more structured.

# Aims

An out-of-the-box platform for:

1. general use / researching (web, email, viewers)
2. modifying, building, and uploading midibox apps
3. developing PCBs/schematics/panels
4. making music
5. dev for other similar projects (arduino, synth DIY, etc)

# Software

Please name any suggestions you have, especially where you see a
